Javelin is a flexible, scalable and intelligent production planning and control system offering advanced functionality and value in the key areas of manufacturing and assembly. Javelin allows SME organisations to successfully compete in difficult economic and market conditions, through direct productivity improvements and lower IT infrastructure costs.

**Supports Direct Interfaces**
Javelin supports direct interfaces to the best of breed accounts packages, protecting investment in existing systems and can be easily integrated with new peripheral systems.

**Various Finance Options**
Whilst the majority of companies finance IT projects via traditional capital expenditure methods Javelin is able to offer a number of alternative financing methods such as leasing and rental.
The Javelin business management software is sold as a single core product with a few functionality specific add-on modules highlighted below in red. The product is structured into virtual modules where a range of advanced capability is available, details of which are below:
